IMO-Vega Guide

The STCW Code comprises two parts:

Part A - Mandatory standards regarding provisions of the Annex to the 1978 STCW Convention, as amended, and

Part B - Recommended guidance regarding provisions of the 1978 STCW Convention, as amended.

Each section of the STCW Code refers to each regulation annexed to the Convention.

IMO-Vega Note

The 2010 amendments to the STCW Code, as adopted by Resolution 2 to the Final Act of the Manila Conference, will enter into force 2012-01-01. See corresponding section applicable to 2012-01-01.

* * *

The STCW Code Part A is made mandatory in the STCW Convention Reg. I/1 paragraph 2.

Document id: SC10A0301AB

The 2010 Manila Amendments to the Seafarers’ Training, Certification and Watchkeeping (STCW) Code

3 August 2010

PART A

Mandatory standards regarding provisions of the annex to the STCW Convention

CHAPTER III

Standards regarding engine department

Section A-III/2

Mandatory minimum requirements for certification of chief engineer officers and second engineer officers on ships powered by main propulsion machinery of 3,000 kW propulsion power or more

Applicable from 2012-01-01, see IMO-Vega Note

Standard of competence

1 Every candidate for certification as chief engineer officer and second engineer officer of seagoing ships powered by main propulsion machinery of 3,000 kW power or more shall be required to demonstrate ability to undertake, at the management level, the tasks, duties and responsibilities listed in column 1 of table A-III/2.

2 The minimum knowledge, understanding and proficiency required for certification is
listed in column 2 of table A-III/2. This incorporates, expands and extends in depth the subjects listed in column 2 of table A-III/1 for officers in charge of an engineering watch.

3 Bearing in mind that a second engineer officer shall be in a position to assume the responsibilities of the chief engineer officer at any time, assessment in these subjects shall be designed to test the candidate’s ability to assimilate all available information that affects the safe operation of the ship’s machinery and the protection of the marine environment.

4 The level of knowledge of the subjects listed in column 2 of table A-III/2 shall be sufficient to enable the candidate to serve in the capacity of chief engineer officer or second engineer officer. *

* The relevant IMO Model Course(s) may be of assistance in the preparation of courses.

5 Training and experience to achieve the necessary level of theoretical knowledge, understanding and proficiency shall take into account the relevant requirements of this part and the guidance given in part B of this Code.

6 The Administration may omit knowledge requirements for types of propulsion machinery other than those machinery installations for which the certificate to be awarded shall be valid. A certificate awarded on such a basis shall not be valid for any category of machinery installation which has been omitted until the engineer officer proves to be competent in these knowledge requirements. Any such limitation shall be stated on the certificate and in the endorsement.

7 Every candidate for certification shall be required to provide evidence of having achieved the required standard of competence in accordance with the methods for demonstrating competence and the criteria for evaluating competence tabulated in columns 3 and 4 of table A-III/2.

Near-coastal voyages

8 The level of knowledge, understanding and proficiency required under the different sections listed in column 2 of table A-III/2 may be varied for engineer officers of ships powered by main propulsion machinery with limited propulsion power engaged on near-coastal voyages, as considered necessary, bearing in mind the effect on the safety of all ships which may be operating in the same waters. Any such limitation shall be stated on the certificate and in the endorsement.

</tr>
<tr>
<td>Manage the operation of propulsion plant machinery</td>
</tr>
</tbody>
</table>
## Plan and schedule operations

**Theoretical knowledge**
- Thermodynamics and heat transmission
- Mechanics and hydromechanics
- Propulsive characteristics of diesel engines, steam and gas turbines, including speed, output and fuel consumption
- Heat cycle, thermal efficiency and heat balance of the following:
  - .1 marine diesel engine
  - .2 marine steam turbine
  - .3 marine gas turbine
  - .4 marine steam boiler

**Examination and assessment of evidence obtained from one or more of the following:**
- .1 approved in-service experience
- .2 approved training ship experience
- .3 approved simulator training, where appropriate
- .4 approved laboratory equipment training

The planning and preparation of operations is suited to the design parameters of the power installation and to the requirements of the voyage.

## Plan and schedule operations (continued)

**Refrigerators and refrigeration cycle**
- Physical and chemical properties of fuels and lubricants
- Technology of materials
- Naval architecture and ship construction, including damage control

## Operation, surveillance, performance assessment and maintaining safety of propulsion plant and auxiliary machinery

**Practical knowledge**
- Start up and shut down main propulsion and auxiliary machinery, including associated systems
- Operating limits of propulsion plant
- The efficient operation, surveillance, performance assessment and maintaining safety

**Examination and assessment of evidence obtained from one or more of the following:**
- .1 approved in-service experience
- .2 approved training ship experience
- .3 approved

The methods of preparing for the start-up and of making available fuels, lubricants, cooling water and air are the most appropriate.

Checks of pressures, temperatures and revolutions during the start-up and warm-up period are in
of propulsion plant and auxiliary machinery

Functions and mechanism of automatic control for main engine

Functions and mechanism of automatic control for auxiliary machinery including but not limited to:

.1 generator distribution systems
.2 steam boilers
.3 oil purifier
.4 refrigeration system
.5 pumping and piping systems
.6 steering gear system
.7 cargo-handling equipment and deck machinery

simulator training, where appropriate

.4 approved laboratory equipment training

accordance with technical specifications and agreed work plans

Surveillance of main propulsion plant and auxiliary systems is sufficient to maintain safe operating conditions

The methods of preparing the shutdown, and of supervising the cooling down of the engine are the most appropriate

The methods of measuring the load capacity of the engines are in accordance with technical specifications

Performance is checked against bridge orders

Performance levels are in accordance with technical specifications

Manage fuel, lubrication and ballast operations

Operation and maintenance of machinery, including pumps and piping systems

Examination and assessment of evidence obtained from one or more of the following:

.1 approved in-service experience
.2 approved training ship experience
.3 approved simulator training, where appropriate

Fuel and ballast operations meet operational requirements and are carried out so as to prevent pollution of the marine environment

Function: Electrical, electronic and control engineering at the management level
